Sai Akash Neela

Senior AI Engineer · AI, IoT, Cloud & DevOps Architect · United Kingdom

saiakashneela@outlook.com | +44 7767934364 | saiakashneela.com | linkedin.com/in/saiakashneela | github.com/SaiAkashNeela

PROFILE

Senior AI Engineer with 6+ years building and running production systems across AI, cloud, DevOps and full-stack engineering. At Levocell I own the architecture end to end for connected battery and solar systems (IoT over MQTT and NB-IoT, cloud, data and AI), alongside DevOps, full-stack development and database administration. I have shipped RAG-based Q&A, AI agents, MCP tooling and voice AI with OpenAI, Claude and Gemini; run AWS, Azure and Cloudflare infrastructure with Kubernetes and Terraform; and build my own products, from native Rust and Swift desktop apps to privacy-first web tools.

PROFESSIONAL EXPERIENCE

Levocell · levocell.ai **Aug 2026 – Present**

Senior AI Engineer

Senior engineer and architecture lead at a UK smart-energy company combining renewable energy, battery storage and AI, from plug-in solar and home batteries to commercial battery energy storage (BESS) and modular AI data centres.

- Architect Levocell's connected-energy platform end to end: device connectivity, cloud, data and AI layers.
- Design IoT connectivity for battery and solar systems over MQTT and NB-IoT, from device telemetry ingestion to real-time monitoring.
- Build AI-driven energy management that learns usage patterns and optimises battery charging around electricity tariffs.
- Own DevOps: cloud infrastructure, CI/CD, containers, observability, backups and security across environments.
- Lead full-stack development of web apps, dashboards and APIs, and administer production databases.
- Set engineering standards and make the architecture calls across battery, IoT and AI products.

Roxonn · roxonn.com **Aug 2025 – Aug 2026**

AI & Cloud Operations Engineer

Ran the cloud infrastructure and automation stack behind Roxonn's apps and internal systems, automating deployments, workflows and AI components.

- Managed AWS environments (ECS Fargate, EC2, RDS, S3, IAM, Route 53) with stable deployments, clean scaling and secure configuration.
- Deployed containerised applications with Dokploy and Coolify (runtime, SSL, monitoring, upgrades), plus Railway and Hetzner environments.
- Built n8n workflow automation integrating internal systems, third-party tools and custom APIs.
- Maintained Cloudflare infrastructure: R2, Workers, Zero Trust, Tunnels and custom caching rules.
- Used MCP servers and custom scripts to automate deployments, backups, logs, health checks and provisioning.
- Supported RAG-based internal AI systems: vector indexes, ingestion pipelines and low-latency access; improved CI/CD and monitoring.

Bell Soft LTD · bellsoft.co.uk **Sep 2022 – Aug 2025**

Lead DevOps Engineer

Designed, implemented and optimised DevOps solutions across hybrid AWS and Azure environments.

- Automated CI/CD with Jenkins, GitHub Actions and Azure DevOps, including Docker builds to ECR and deployments to EKS.
- Ran EKS clusters with Prometheus, Grafana, New Relic APM and Sumo Logic for SLA tracking and fast root-cause analysis.
- Provisioned infrastructure with Terraform and AWS CloudFormation, including reusable modules for self-hosted agents.
- Configured AWS Backup and used AWS DataSync for S3 ↔ Azure Blob Storage migrations.
- Automated patching (Systems Manager, PowerShell) and vulnerability scanning (Snyk, Mend); led the move to DACPAC SQL deployments.
- Deployed React apps on S3 + CloudFront and handled SOC 2 compliance requirements.

Qapita Pte Ltd · qapita.com **Sep 2021 – Sep 2022**

DevOps Engineer

Deployment, monitoring and maintenance of an equity management platform and its infrastructure.

- Managed MongoDB, SQL and PostgreSQL databases: query performance, backups and high availability.
- Worked across AWS (IAM, EC2, RDS, Lightsail, SES, S3, Route 53, Elastic Beanstalk, CodePipeline, EKS); deployed microservices with Docker and Kubernetes.

- Configured CI/CD pipelines with automated security checks (Snyk, Mend) and managed DNS, email and domains.

Uniquode · uniquode.in **Aug 2020 – Sep 2021**

Junior DevOps & Software Engineer

Supported deployments, environment stability and feature development.

- Wrote Python and Bash automation; built frontend features with HTML, CSS, JavaScript and React.
- Supported AWS (EC2, S3, IAM, RDS backups), SQL and MongoDB operations, Firebase and DigitalOcean.

SELECTED PRODUCTS

- **ArivuLabs** (arivulabs.ai): AI voice agents answering and making business calls in 70+ languages, plus ArivuStudio for AI video, ads, dubbing and voice.
- **PilotFox** (pilotfox.app): Cookieless web and product analytics linking Stripe, Dodo Payments and Polar revenue to visits; funnels, session replay, REST API and MCP.
- **BucketStack** (bucketstack.app): Open-source native S3 manager for macOS, Windows and Linux (Rust, Tauri 2, React 19) for AWS S3, Cloudflare R2, MinIO, Wasabi and B2.
- **MacKitty** (mackitty.com): Open-source native Swift/SwiftUI Mac cleaner that safely reclaims developer caches without touching personal files.
- **checkemail** (checkemail.dev): Zero-dependency, MIT-licensed email validation for Node.js, Bun, Docker and the browser.
- **PDFamaze** (pdfamaze.com): 51 open-source PDF tools running fully in the browser (pdf-lib, pdf.js, WebAssembly).
- **OpenFlareStack** (openflarestack.com): Nightly-ranked catalog of 300+ open-source apps that deploy to your own Cloudflare account.
- **Also**: Gita Sadhana, StickyDraft, TopTheBid. Co-Founder & CTO of GrabAI Ltd (grabai.co.uk); Founder of PixelMercury (pixelmercury.com).

TECHNICAL SKILLS

AI & Agents: LLM apps (OpenAI, Claude, Gemini), AI agents, voice AI, RAG pipelines, MCP servers, vector databases, n8n

IoT & Energy: IoT architecture, MQTT, NB-IoT, device telemetry, battery energy storage (BESS), solar and smart energy

Cloud & DevOps: AWS (ECS, EC2, RDS, S3, Lambda, CloudFront, IAM, VPC, CloudWatch), Azure (VMs, Key Vault, Entra ID, WAF), Cloudflare (Workers, R2, Zero Trust, Tunnels), Docker, Kubernetes (EKS), Terraform, CloudFormation, GitHub Actions, Jenkins, Azure DevOps, Dokploy, Coolify, Hetzner, Railway

Observability & Security: Prometheus, Grafana, New Relic, Sumo Logic, Snyk, Mend, Veracode, SOC 2

Data: Database administration, PostgreSQL, MongoDB, Redis, SQL Server, SQLite

Engineering: System architecture, TypeScript, React, Next.js, Node.js, Bun, Python, Go, Rust, Tauri, Swift/SwiftUI, React Native, C#/.NET Core, Java, REST & GraphQL APIs, Stripe

EDUCATION

University of Hertfordshire — Master's in Advanced Computer Science

KL University — Bachelor's in Computer Science with Cloud Computing Specialisation. Degree project: deployed web apps on AWS (Lightsail, Route 53, EC2) and Firebase as project head.

CERTIFICATIONS & PUBLICATION

- AWS Solutions Architect Associate (Simplilearn) · Salesforce Certified Administrator · RPA Professional (Automation Anywhere) · Java (Wipro)
- Project paper published in IEEE: IEEE Xplore, Document 9441974
